

CORPORATE IDENTITY

Brand guidelines

A confident, intelligent and operational identity for the next generation of property inspections.

VERSION 1.0

September 2026

Clarity at every property

The brand should make complex inspection operations feel visible, controlled and fast.

PURPOSE

Help property teams see condition, risk and compliance clearly enough to act with confidence.

POSITIONING

Inspect360 is the AI-driven inspection operating platform for property teams that need faster evidence, consistent reporting and stronger oversight.

BRAND IDEA

See more. Act faster. Manage risk.

Brand personality

1

INTELLIGENT

Evidence-led, not jargon-heavy

2

DECISIVE

Clear outcomes and next actions

3

TRUSTWORTHY

Accurate, accountable, secure

4

HUMAN

Technology that supports people

BRAND TEST

Every communication should reduce uncertainty, expose risk or accelerate action.

The master identity

The logo combines inspection, the built environment and a complete 360-degree view.

MASTER LOGO

What the mark signals

- The circular arrow communicates a complete inspection cycle and continuous oversight.
- The building forms anchor the brand in property, assets and the built environment.
- The teal structure acts as the detected priority: the issue that needs attention.
- The bold wordmark gives the platform authority without feeling institutional.

Logo hierarchy

1. Master logo

Use for websites, reports, presentations, proposals and principal brand communications.

2. Symbol

Use only where space is constrained, such as an app icon, avatar, favicon or interface tile.

3. Monochrome

Use when reproduction is restricted to one colour, embossing, engraving or single-colour print.

Approved logo variants

Choose the version that gives the mark maximum clarity and contrast.

FULL COLOUR / LIGHT

Preferred version

REVERSED / DARK

For navy and dark imagery

MONO NAVY

For one-colour reproduction

MONO WHITE

For restricted dark use

Clear space and minimum size

The identity needs room to remain recognisable, especially in operational interfaces.

Clear-space rule

Keep a minimum exclusion zone of 1X on every side. No type, photography, interface controls or page edges may enter this area.

Minimum size

- Digital master logo: 140 px wide minimum
- Print master logo: 35 mm wide minimum
- Symbol: 24 px digital or 8 mm print minimum

Small-format rule

Below the master-logo minimum, switch to the symbol. Never squeeze or simplify the full wordmark manually.

PRODUCTION NOTE

Use vector artwork for print and signage.

A precise, high-trust palette

Navy carries authority. Teal signals intelligence, detection and forward movement.

 INSPECT NAVY #013765	 SIGNAL TEAL #04C6BD	 DEEP NAVY #021F36	 OPERATIONAL SLATE #405B70	 SYSTEM MIST #F2F7F8	 WHITE #FFFFFF

Functional interface colours

 SUCCESS #2E8B75	 WARNING #F2B84B	 CRITICAL #D94F4F	 INFO #3378B3
--	--	---	---

ACCESSIBILITY

Use navy on white, white on navy, or teal on navy for readable text. Teal on white is an accent only, never body copy. Always proof and final print with the production supplier.

Modern, direct and highly readable

A two-family system balances confident headlines with dense operational information.

PRIMARY / POPPINS

Clarity
before complexity.

Recommended weights: SemiBold 600 and Bold 700

SECONDARY / INTER

Inspection teams need information that is fast to scan, easy to compare and difficult to misread.

Recommended weights: Regular 400 and Medium 500

Hierarchy

STYLE	TYPE	SIZE	USE
H1	Poppins Bold	36-52 pt	Campaign and page headlines
H2	Poppins SemiBold	24-32 pt	Section and feature headlines
H3	Poppins SemiBold	16-20 pt	Cards and sub-sections
BODY	Inter Regular	10-12 pt	Long-form copy and reports
UI	Inter Medium	12-16 px	Controls, tabs and data labels

TYPE RULES

- Use sentence case
- Keep headlines short
- Avoid all-caps paragraphs
- Use Arial if brand fonts are unavailable

Built from signals and structure

The visual system extends the logo without copying it everywhere.

360 ARC

Use partial circular arcs to frame decisions, progress and continuous oversight.

PROPERTY GRID

Use simple vertical structures to suggest assets, portfolios and operational scale.

DETECTION POINT

Use teal highlights to identify the issue, exception or next action.

Composition rules

01 Use one dominant signal per layout.

02 Let navy provide structure and teal provide emphasis.

03 Prefer generous whitespace over decorative density.

04 Keep corners softly rounded in digital layouts.

Evidence, environments and action

Photography should feel like real property operations - observed closely and managed confidently.

PEOPLE IN CONTEXT

Inspectors and property teams using evidence in real environments.

ASSET DETAIL

Specific defects, condition and compliance details with visual relevance.

OPERATIONAL SCALE

Buildings, portfolios and teams that show the system-level challenge.

Image treatment

- Prioritise natural light, accurate colour and visible context.
- Show technology being used, not abstract AI imagery or glowing robots.
- Use teal annotations sparingly to point to evidence, risk or action.
- Avoid generic keys, handshakes, hard hats without context and staged stock-photo smiles.

THE TEST

Could this image only belong to a property-inspection brand? If not, it is too generic.

Confident. Specific. Useful.

Inspect360 should sound like an experienced operator who understands risk and respects the reader's time.

WE ARE

- Clear and outcome-led
- Evidence-based
- Commercially aware
- Calm under pressure

WE ARE NOT

- Hype-driven
- Overly technical
- Fear-mongering
- Vague about AI

WRITING RULE

- Lead with the operational pain
- Name the measurable outcome
- Explain AI in plain language
- End with one clear action

Core messages

PRIMARY

Reports in minutes, not days.

OPERATIONS

Scale inspection quality without scaling administration.

RISK

Turn property evidence into faster, defensible action.

PLATFORM

One inspection workflow from scheduling to approved report.

CLAIM DISCIPLINE

Use 'Inspections in 60 seconds' only as a campaign claim where the exact workflow and evidence support it.

Do not turn speed into an unqualified corporate promise. Trust matters more than theatre.

A consistent system in use

Examples show how the identity behaves across campaign and document formats.

SOCIAL / CAMPAIGN

REPORT / DOCUMENT

EMAIL / SALES

Brand clarity inside the platform

The interface should use brand colour as a system of meaning, not decoration.

UI principles

Navy = structure | Teal = primary action | Status colours = meaning | Mist = separation

Protect the identity

Consistency builds recognition. These are controls, not creative suggestions.

DO NOT STRETCH

Change the aspect ratio

DO NOT RECOLOUR

Invent new logo colours

DO NOT ROTATE

Tilt or angle the mark

DO NOT ADD EFFECTS

Use shadows, bevels or glow

Inspect360

DO NOT REBUILD

Retype or redraw the wordmark

DO NOT CLUTTER

Place over busy imagery

One-page brand checklist

Use this page before approving any customer-facing Inspect360 material.

LOGO

- Use an approved master
- Preserve 1X clear space
- Check minimum size
- Use vector for print

COLOUR

- Navy provides structure
- Teal signals action
- Teal on white is not body text
- Status colours stay functional

TYPE

- Poppins for headlines
- Inter for body and UI
- Use sentence case
- Keep headlines concise

VOICE

- Lead with the outcome
- Be specific about AI
- Avoid hype and fear
- End with one action

FINAL APPROVAL QUESTION

Does this make Inspect360 feel clearer, more credible and easier to act on?

If the answer is no, simplify it.

Production standards

A strong identity fails quickly when the wrong file format or outdated artwork enters circulation.

Approved formats

FORMAT	ROLE	USE	STATUS
SVG	Digital master	Web, product UI, presentations	Preferred
PDF / EPS	Print master	Signage, print, large-format	Preferred
PNG	Transparent raster	Office documents, social, email	Use at native size
JPG	Flattened raster	Photography only	Never for the logo

CURRENT SOURCE ARTWORK

The supplied PNG is suitable for digital use. Commission an approved SVG/PDF master before large-format print, signage or third-party production.
