

Billing & Subscription page — required changes

Route: `/billing` · Owner: Nadeem Mohammed · Target: ship before outbound campaign launch

CONTEXT

Why this matters now

This page is about to become the landing point for cold outbound traffic. Prospects will arrive from an email, having never spoken to anyone, and they will decide whether to put a card in within about ninety seconds. Every ambiguity on this page costs a conversion.

The slider stays. The information architecture around it changes.

Four defects blocking launch.

1. **Plan state contradicts itself.** The header reads "Active Plan: Growth", the slider panel reads "Your Tier: Starter", the credits card reads "0 Credits", and the top-up section reads "Your Plan: Growth · Used this month: 30/30". Four components, three different answers.
2. **The volume ladder is broken.** All three top-up packs are priced at £5.50 per inspection, but the 100 Pack carries a "BEST VALUE" badge. It is not better value. It is the same value in a larger quantity.
3. **Unit price is invisible.** The subscription panel shows £49.00 but never shows £4.90 per inspection — which is the only number a buyer can compare against a competitor.
4. **Billing period defaults to Monthly.** The annual option is discounted and better for cash collection, and it is the non-default.

P0 · BLOCKER

One source of truth for plan state

The root cause of the contradiction is that four components each derive plan state independently. Replace with a single store object. Nothing on the page computes plan state locally.

```
billingState = {
  currentPlan: { // what they are subscribed to NOW
    tier: 'growth', // starter | growth | professional | enterprise | custom
    billingPeriod: 'annual', // monthly | annual
    includedPerMonth: 30,
    usedThisPeriod: 24,
    topUpCredits: 0, // purchased packs, roll over
    renewsOn: '2026-08-23',
    status: 'active' // none | trialing | active | past_due | canceled
  },
  selectedPlan: { // what the SLIDER is previewing
    tier: 'growth',
    inspections: 30,
    billingPeriod: 'annual'
  }
}
```

Binding rules

COMPONENT	READS FROM	REQUIRED COPY
Header card 1	currentPlan	"Current plan" — value = tier name + billing period. If <code>status === 'none'</code> , show "No active plan".
Header card 2	currentPlan	"Inspections left" — <code>(included - used) + topUpCredits</code> of <code>included + topUpCredits</code> . Never render a bare "0".
Header card 3	currentPlan	"Renews" / "Ends" depending on <code>status</code> .
Slider panel	selectedPlan	Label must read "Selected plan", never "Your tier". "Your" implies current state and is the source of the collision.
Top-up section	currentPlan	Unit rate resolves from <code>currentPlan.tier</code> , not <code>selectedPlan.tier</code> .

Rule of thumb for the whole page: anything above the slider describes what the customer has. Anything inside the slider panel describes what they are considering. Those two things must never share a label.

Slider bands, labelling, and live unit price

2.1 — Add the Starter tick

The slider currently starts at 10 but the first labelled tick is 30 (Growth). The Starter band (10–29) is unlabelled, so a buyer at the default position cannot see which tier they are on without reading the panel below. Add a tick at 10 labelled "Starter" and at 500 labelled "Custom".

2.2 — Band configuration

Move all tier boundaries and rates into a single config file. No hardcoded prices in components.

```
TIERS = [
  { id:'starter',      min:10,  max:29,  rate: 4.90 },
  { id:'growth',      min:30,  max:74,  rate: 4.30 },
  { id:'professional', min:75,  max:199, rate: 3.70 },
  { id:'enterprise',  min:200, max:499, rate: 3.20 },
  { id:'custom',      min:500, max:null, rate: null } // quote only
]
TOPUP_MULTIPLIER = 1.10 // overage premium
ANNUAL_MULTIPLIER = 0.80 // the advertised 20% saving
```

Rates above are placeholders pending sign-off. They are internally consistent — the rate falls at every step and the current £49/10 Starter entry point is preserved at £4.90. But the existing top-up cards price Growth at £5.50 per inspection, which is *more* than the £4.90 a Starter customer pays. That is the ladder inverting, and a buyer comparing the two panels will see it. Confirm the final numbers before build; the structure holds regardless of what they are.

2.3 — Always show the unit price

Directly beneath the selected-plan line, render: `£{rate} per inspection · AI analysis included`. This is the only figure a prospect can benchmark against a competitor, and it is currently absent from the page.

Acceptance criteria

- ☐ Every tick on the slider is labelled with a tier name.
- ☐ Moving the slider updates band name, unit rate, and total within one frame — no reload, no debounce delay over 100ms.
- ☐ A unit test asserts `TIERS[i].rate > TIERS[i+1].rate` for every adjacent pair.
- ☐ Setting the slider above 499 hides all pricing and swaps the CTA to "Request a quote".

P0 · BLOCKER

Default the billing period to Annual

The Monthly / Annual toggle currently defaults to Monthly. Flip it. Annual becomes the pre-selected state on page load for all new subscriptions.

When Annual is active, the price block must show three lines, in this order:

1. **Annual total** — the amount actually charged today. Largest type.
2. **Monthly equivalent** — smaller, muted, so the number stays comparable to competitors who quote monthly.
3. **Saving** — "You save £387 a year" in teal.

Selecting Monthly must show the inverse: the monthly charge, and beneath it "Switch to annual and save £387". Do not hide the saving when the customer is on the losing option — that is the moment it is most useful.

Why this is a P0 and not a nicety: a customer on £129/month is twelve separate churn decisions and twelve separate card-failure risks. The same customer on annual is the full amount in the account on day one and no churn decision for a year. At forty customers this is the difference between drip-feeding and having working capital.

Acceptance criteria

- ☐ Annual is selected on first paint, with no layout shift when the price resolves.
- ☐ The correct Stripe price ID is passed for the selected period — verify both paths in Stripe test mode.
- ☐ Toggling the period does not reset the slider position.
- ☐ Existing monthly subscribers see their current period pre-selected, not the default.

P0 · BLOCKER

Give the top-up packs a real volume ladder

All three packs are £5.50 per inspection and the 100 Pack is badged "BEST VALUE". Either the ladder becomes real or the badge comes off. It should be the ladder.

Top-up rate derives from `currentPlan.tier` and the pack size, using a discount applied on top of the tier rate:

PACK	DISCOUNT ON TOP-UP RATE	EXAMPLE (GROWTH, £4.30 BASE + 10% OVERAGE = £4.73)
20	0%	£4.73/insp → £95
50	-5%	£4.51/insp → £226
100	-9%	£4.30/insp → £430

Required on each card

- Pack size, total price, and unit rate — all three, always.
- On the largest pack only: badge reading "**Lowest rate**", not "Best value". It states a fact rather than making a claim.
- Beneath the largest pack: "Save £43 against buying five 20-packs." Show the comparison arithmetic.
- Replace "Growth tier pricing applies" with "Priced at your Growth rate" — plain, second person.

Acceptance criteria

- ☐ Unit rate visibly differs across the three cards for every tier.
- ☐ A unit test asserts pack unit rates decrease as pack size increases, for all five tiers.
- ☐ Purchased credits are added to `topUpCredits` and appear in the header card immediately after Stripe confirms.
- ☐ Credits do not expire at period end. State this in the FAQ.

P1

Usage-triggered upgrade prompt

This is the single highest-revenue component on the page and it does not currently exist. When a customer crosses 80% of their included allowance, render a banner directly above the slider panel:

```

if (usedThisPeriod / includedPerMonth >= 0.8) {
  show banner:
    "You've used {used} of {included} this month.
    {nextTier} gives you {nextIncluded} for £{delta} more – and
    drops your rate to £{nextRate} per inspection."
  CTA: "Move to {nextTier}" → pre-positions the slider at nextTier.min
}

```

Two behaviours matter here. The banner must **pre-position the slider** rather than navigating away — the customer sees the new price resolve in front of them. And the message leads with the rate drop, not the extra quota, because the rate drop is the argument that survives a finance conversation.

Instrument this. Fire an event when the banner renders and when it converts. The ratio between those two numbers is the most important growth metric in the product, and right now it is unmeasurable because the banner does not exist.

P1

Empty state — the trial bridge

Cold outbound sends prospects a completed AI report of their own property. They arrive on this page having already seen the output. The gap is that they must now subscribe before producing a second one.

For accounts with `status === 'none'` and no prior trial, replace the subscription panel's primary CTA with:

- Headline: **"Run 3 inspections free"**
- Body: "No card required. Your reports are yours to keep."
- Secondary link beneath: "Or choose a plan" — expands the slider panel.

After the third free inspection completes, surface the slider panel with Starter pre-selected and the unit price shown. Habit first, card second.

BILL-07

P2

Feature cards and FAQ

7.1 — Make feature cards tier-aware

The four cards (AI Inspections, Team Collaboration, Marketplace Access, Full Ledger) render identically at every slider position, so moving the slider appears to buy quota and nothing else. Grey out cards not included in `selectedPlan.tier` and label them "Professional and above". The slider should visibly unlock capability.

7.2 — Extend the FAQ to six items

1. What happens if I exceed my monthly allowance? (*existing*)
2. How does the annual discount work? (*existing*)
3. Do unused inspections roll over?
4. Can I change plan mid-month? — state prorating behaviour explicitly.
5. How do I cancel? — link straight to the Stripe portal. Hiding this loses more sales than it saves.
6. Can I export my inspection data if I leave? — for a system-of-record product this is a purchase objection, not an offboarding question.

QA

Test matrix

ACCOUNT STATE	EXPECTED HEADER	EXPECTED CTA
No plan, no trial used	"No active plan" · "0 of 0"	Run 3 inspections free
No plan, trial used	"No active plan" · "0 of 0"	Start plan
Starter, 4 of 10 used	"Starter · Annual" · "6 of 10"	Disabled at slider=10; "Upgrade plan" above
Growth, 24 of 30 used	"Growth · Annual" · "6 of 30"	Upgrade banner visible
Growth, 30 of 30 + 20 credits	"Growth · Annual" · "20 of 50"	Upgrade banner visible
Growth, past due	"Growth · Payment failed"	Update payment method → Stripe portal
Slider at 500+	unchanged	Request a quote; all prices hidden

Cross-cutting checks

- ☐ No component displays a plan name derived from anything other than `billingState`.
- ☐ Page renders correctly at 375px width — the slider is the hardest element on mobile and cold traffic will be roughly half mobile.
- ☐ Slider is operable by keyboard with visible focus, and announces the tier name on change.
- ☐ Stripe test mode: monthly subscribe, annual subscribe, upgrade with proration, top-up purchase, cancellation.
- ☐ No layout shift between first paint and price resolution.

SEQUENCE

Build order

1. **BILL-01** — state consolidation. Everything else depends on it.
2. **BILL-02** and **BILL-03** — slider config and annual default. Both are small once state is clean.
3. **BILL-04** — top-up ladder. Blocked only on final rate sign-off.
4. **BILL-05**, **BILL-06** — revenue and activation mechanics.
5. **BILL-07** — polish. Ship without it if the outbound campaign is ready first.

Tickets 1 through 4 are the launch gate. Do not send outbound traffic to this page until they are live, because every prospect who lands on a page that contradicts itself is a prospect you do not get a second attempt at.
